

2018 INOCULANT GUIDE

CHR HANSEN

SiloSolve FC

- Scavenges oxygen to produce lactic acid
- Allows for early opening of feedstuff
- 7 Days Fully Fermented
- L. Buchneri with least amount of dry matter lost
- Reduced heating and improve aerobic stability

Biomax Pro

- Improved Biomax product with additional bacteria for faster pH Drop
- All purpose inoculant for haylage and corn silage
- Improves fermentation time

SiloSolve MC

- Recommended inoculant for haylage
- Very strong fermenter offering reduced fermentation time
- Inhibits Clostridia growth and butyric acid
- Allows harvest over a greater variation of moistures
- University validated 2 pound milk response

SiloSolve AS

- L. Buchneri with least amount of dry matter lost
- Reduce heating and improve aerobic layer
- Reduce growth of yeast and mold
- Enhance bunk life

SiloSolve OS

- Apply only to surface right before plastic covering
- Reduce dry matter loss up to 60% in top layer
- Improve aerobic stability
- Combination of bacteria and Sodium benzoate preservative
